ABOUT ME

Computer science student with interest in cyber security and software development. Building project to practice my skills on penetration testing and blue team operations. Along with building web apps and services as a proof of work. Proficient in multiple programming languages including python, bash and also learning go lang to use in my scripting and project workflows.

EDUCATION / CERTIFICATIONS

2024 - 2027

Bachelor of Computer Applications

SGTBK College

Focused on core computer science and applications: programming in C/C++, Java, and Python; data structures, databases, operating systems, and networking.

2026

BTJA (Blue Team Junior Analyst) certificate

SecurityBlue.team
(centri)

Completed BTJA training covering network analysis, OSINT, threat hunting, dark web research, vulnerability management, and digital forensics. Gained hands-on experience through labs and exercises in network traffic analysis, log review, and basic forensic techniques.

EXPERIENCE

Projects:-

- FileFlow - (python, cloudflare, cryptography, flask)

A zero-knowledge file sharing tool built to share files securely — the closest existing project to a security-first design goal: the server shouldn't be able to read what it's storing

- Better-post - (next.js, sharp.js, javascript)

A JavaScript project exploring improvements to how posts are created and displayed. It is a web based tool to import files on local host or on a personal server. Provides a quick workflow for presentation ready media

- Staky-ai (next.js, google-gemini, file processing)

A notes tool that converts spoken input into structured written notes. Along with various other sources including documents and images.

SKILLS

- **Languages and frameworks** - python, go lang, html, css, tailwindcss, nextjs, flask, sql, nodejs, javascript, reactjs
- **Security tools and frameworks** - Burp Suite, Nmap, Wireshark
